Speaker
Chris Estes
President Estes Design
an environmental design and
consulting company

Concrete for the pavement that lasts

Low Impact Developments

Before starting his own firm, Chris Estes had 20 years of experience in the municipal market working for City of Charlotte engineering department and also for the storm water division. From 1993 to 2001 he was the City's sole resource for innovative storm water design, environmental permitting, training and research. As owner of Estes Design Inc., Mr. Estes and Dr. Craig Allan finalized research resulting in a peer review publication for the Journal of American Water Resources Association.

Currently Mr. Estes is focusing his efforts on the restoration and protection of water quality by targeting sources of negative impact associated with impervious pavement. His most recent projects include combining Best Management Practices such as bio-retention and pervious concrete. His current research is storm water infiltration rates into clay soils.
